TOP SECRET

USSRStatus of Tolyatti Automobile Plant

25X1D

Satellite photography in [] of the large automobile plant being built with Fiat aid at Tolyatti indicates that the plant may be capable of assembling cars using parts produced elsewhere, but it did not appear to be capable of producing the parts. The Soviets have recently announced that the plant has produced its first automobile and will put out more than 20,000 of them before the end of the year. The planned full capacity of this plant is 660,000 automobiles a year using parts manufactured on site.

25X1D

25X1D

The main assembly building appeared externally complete in []. If the internal components of this building have been installed, it would be capable of assembling cars. By [] a casting building, eight production support buildings and a second stack at the thermal power plant were complete, but many facilities needed for mass production, including the internal road and rail systems, were still incomplete. The area for storing completed vehicles was not graded or paved, the motor vehicle test track was not started, and the final checkout and shipping building and the transshipment area were only in a midstage of construction.

25X1D

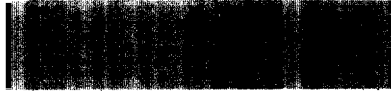

Scattered cloud cover on the [] photography did not permit a look at the plant's vehicle storage, testing, and shipping areas. What activity was observed indicated no significant construction progress over that noted a month earlier.
